

Portfolio of Evidence

Lulamile Mkhungela

31 January 2019

Full Names: Lulamile Mkhungela

ID Number: [REDACTED]

Gender: Male

Technical Skill Set

Lulamile chose Java Android as a primary technology and Java Spring as a secondary. He came off a low skill base and took the opportunity while at The Digital Academy to further his skills and gain exposure where he could. Technically, Lulamile showed a good grasp of Java OOP principles, a good DB proficiency and a good grasp of GIT and DVCS fundamentals. Lulamile is always willing to learn and enhance his skills. He was primarily involved with the implementation of the application from ideation, design, logic for his teams native Android mobile app. He is good in design for mobile apps and He was assisting web development team in coming up with intuitive designs.

A handwritten signature in black ink, appearing to read 'Ed Wrede', positioned above a horizontal line.

Internal Communications Coordinator

Testimonial

I would have no hesitation recommending Lulamile for an extended internship or an intern developer role. He has acquired a technical foundation but would benefit greatly from the ability to further hone his skills before he becomes part of a development team.

Gary Bannatyne
Managing Director & Co-founder

What is The Digital Academy?

The Digital Academy is focused on creating impact and output of digital products and innovations that have commercial intent. It does so by sourcing talented young Africans and further developing them through their delivery of commercial innovations for corporate clients that have industry commercial applications.

The integrity of The Digital Academy is built on the vision to create opportunities for the youth through incentive based learning by partnering with stakeholders that share the same vision and desire for impact. The rapid internship programme is designed to identify talent and fast track these opportunities and success for these individuals.

We have created a real world and industry standard environment which allows for the optimal development of the young software developer to grow technically as well as tactically. Our interns solve real problems with innovative solutions, from ideation to deployment.

Tactical/Soft-skill Report

Why do we measure soft skills at The Digital Academy?

While technical skills may lead to a qualification and a starting contract, interpersonal skills are what are the most valuable to a young professional's career development. One's work ethic, attitude, communication skills, emotional intelligence and a host of other personal attributes are the soft skills that are crucial for career success.

What are we measuring?

We have identified 10 competencies which are absolutely key in the successful completion of our program as well as the development of an innovative mind, and passionate executor.

How do we measure?

We measure the competencies and progress from self-assessments as well as team leader assessments. To complete 360 perspective, the internal communications coordinator also assess the intern's progress as well. These assessments are done twice a month for the duration of the programme.

Softskillsassessment

Letter of Attendance

Dear Future Employer

This letter serves to confirm that Lulamile Mkhungela with ID number [REDACTED] was carefully selected through a 3-stage recruitment process from a pool of approximately 350 applications to be inducted into The Digital Academy on 1 August 2018. He has successfully completed the programme on 31 January 2019.

The programme is a work-integrated and experiential learning programme. It addresses key issues within the South African IT industry, including an alarming percentage of graduate unemployment, and evident skills gap.

The programme is run over 6 months and provides the intern an opportunity to be involved in building challenging and equally exciting projects for our partner. This allows for the transfer and sharpening of knowledge as our focus is on software and technology development skills, supervised by subject matter experts. The intern is equipped with the basic soft and operational skills such as leadership, project management and effective communication. We aim to produce principled, innovative and workplace ready developers, supporting a culture of agile learning and development.

A portfolio of evidence is compiled to support and assist Lulamile justify his career advancement. We believe that Lulamile will absolutely add value to specific workplaces through the application of key technical skills and interpersonal competencies as an individual or within a team, which he has demonstrated.

Co-founder and Managing Director

TechnicalReport

The technical report considers the hard skills possessed and developed by the intern, 10 of which have been identified as key building blocks of the successful software developer.

The skills are rated out of 10 maximum points, at the outset of the program and at its close. The scoring is ultimately done by the technical manager, he is assisted by two mid-level developers.

Competency	Initial assessment	Final assessment
Objected oriented practices	3	5
Maintainability of code	3	5
Documentation	6	8
Problem solving ability	7	7
Primary technology (Java Android)	3	5
Secondary technology (Java Spring)	3	4
Planning of deliverable execution	4	5
Database Proficiency	5	4
Ability to work from a spec	4	4
Server side programming	3	4
TOTAL	4.1	5.1
OVERALL RATING	6	

WorkEvidence

The project represented in the screenshots below are to be considered evidence of applied skill in software development across the development lifecycle.

Lulamile was part of a group called Ouragan and worked as a Designer in a project called EntreHive. EntreHive is targeted towards entrepreneurs. The main feature of the application is the earning and spending of points. These points play the role of money, or a currency. The only way to earn points is by attending events. Events are any activities that involve the gaining of knowledge or skills. The more events a user attends, the more points he/she earns. With these points, the user may purchase goods and services. In other words, entrepreneurs are encouraged to become more skilled and knowledgeable. From a functionality perspective, the application uses a QR code scanner to process all transactions.
